

I-400

Convertible chair for moving, repositioning and transferring patients

- Unlimited repositioning capabilities
- Easy to turn and maneuver
- Increases the users tolerance for long-term seating

The I-400 chair is a convertible chair for safe and comfortable moving and transferring of patients. It has unlimited number of reclined and tilt positions. The ability to frequently reposition a user significantly reduces the chance of pressure ulcers and increases the users tolerance for long-term seating.

The I-400 chair together with a Patient Transfer System [PTS] offers the ability to move between a bed and a chair with ease and enables a single caregiver to easily transfer a patient. Read more about our Patient Transfer System on page 10.

Central locking/steering casters safe for patient and caregiver

Can be equipped with a patient transfer system. See page 10.
