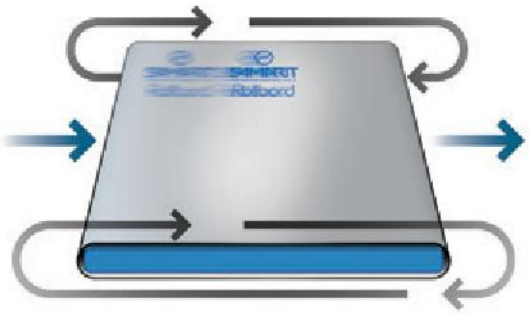
Roll Boards for Lateral Transfer



Roll Boards work like a rolling conveyor belt to laterally transfer a person from bed to stretcher, or stretcher to imaging surface.

- Transfers are easily and safely done with 2 to 3 people, helping ensure no injuries to staff or patient
- Never leaves the area with the patient so it is always readily available for the next transfer
- Wipe down with any of your hospital-approved non-bleach disinfectant wipes
- Lightweight without any metal rollers
- Molded plastic handles for easy transport and for mounting the board on walls or back of doors
- 3-year manufacturer's warranty against any defects
- Disposable clear plastic covers are available for further protection in high fluid transmission environments

- Standard or CT MRI Roll Board Disposable covers **PN: 440.1000**
- Surgi or All-Purpose Utility Board Disposable covers **PN: 440.1400**

- Dispenser and Hanger for Disposable Roll Board Covers (wall or door mount) **PN: 440.4088**

- Wall Mount Hook for Boards **PN: 440.1086**

- **Door Mount Hook for Boards** **PN: 440.1087**

Also be sure to ask about our SLIPP® Lateral Transfer Solutions!

Slipp® is a unique patient moving device which makes transfers and repositioning easier than ever before on both the patient and caregiver! Unlike other patient moving devices, Slipp's unique design lets the patient (regardless of size) literally "slip" on a comfortable surface of sealed fluid that reduces normal function to a minimum. **Better yet, there is no weight limit on any of the Slipp® units!!!**

Easy, convenient, efficient and affordable, Slipp® is quickly becoming the transfer device of choice among leading hospitals, long term care facilities, and ambulance/ EMS services nationwide.

Roll Board types and suggested areas of use:

Standard Roll Board

- Size: 70"x20", fold in half to 35"x20" for easy transport and hanging of board
- Weight: only 6 lbs.
- Suggested Use Area: bed to stretcher transfers

PN: 440.0100

CT MRI Roll Board

- Size: 70"x16", fold in half to 35"x16" for easy transport and hanging of board
- Weight: only 6 lbs.
- Suggested Use Area: Stretcher to narrow imaging surface

PN: 440.0500

Surgi Roll Board

- Size: 48"x16", non-folding
- Weight: only 4 lbs.
- Suggested Use Area: OR table to stretcher

PN: 440.0400

Utility/All-Purpose Roll Board

- Size:48"x20", non-folding
- Weight: only 4 lbs.
- Suggested Use Area: An economical alternative to having mixed sizes if a 3rd person is available to assist with the feet

PN: 440.4460

No Weight Limit

Our Roll Boards provide a safe and proven method to laterally transfer patients in any of your patient care areas.
