When you can't move a window

Dartmouth Hitchcock's perfect alternative to wall track workstations

StableRise™ only requires 24" of wall space for mounting and was the perfect solution for 32 rooms with windows "in the way" at Dartmouth's medical facility in Nashua, NH. After comparing StableRise™ to other wall track systems, Dartmouth's directors decided StableRise™ was a better choice for all 192 rooms in their facility!

Weighing in on wall track systems

Remove the bounce when entering data

With a 225 pound weight capacity, StableRise™ is solid so there is no bounce associated with the keyboard trays of wall track systems. The work surface is stable for writing and for entering data using a laptop or keyboard.

In this photo an actual nurse (not a model) enters vitals as she balances her laptop and paper notes on a small, bouncy, keyboard tray extending from a wall track.

Infection prevention features anti-microbial/anti-bacterial counter top

And wall mounted installation allows room for buffer cleaning below the unit

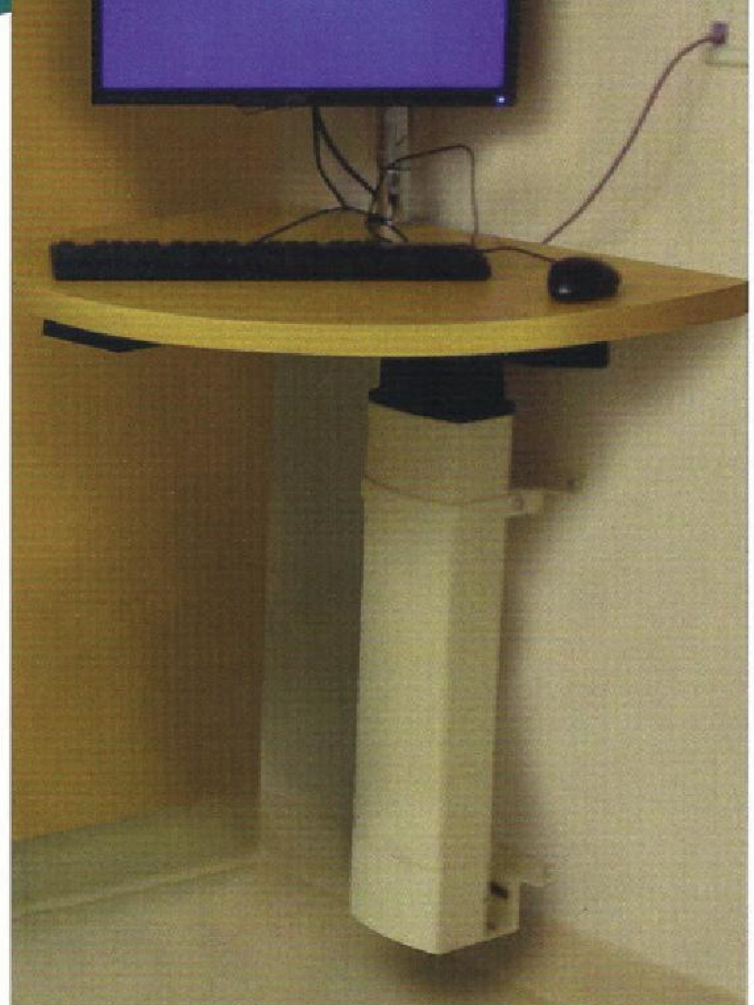

Healthcare professionals also benefit from StableRise's ergonomic design. Just push a button and the unit raises or lowers to optimal working height for standing or sitting. And by adding our patent pending pull and swivel mechanism, the work surface can rotate to a comfortable angle to always face patients.

StableRise™ is designed and made with lasting quality in mind. That's why we stand behind every unit with a 5 year motor guarantee.

StableRise™ costs about the same as a typical wall track system, yet is significantly more functional.

Goldilocks never had it this good!

The “just right” work station for healthcare professionals. Push a button to raise or lower the unit to optimal working height for standing or sitting.

**↑RIGHT
HEIGHT**
PERFECT WORK SURFACES

Today’s healthcare professional is aware of the health benefits of alternating between sitting and standing while working. Many wall track systems are difficult and clumsy to adjust; requiring Doctors and nurses to loosen knobs and manually lift or lower the arm to a desired height. StableRise’s electric motor raises or lowers the work surface at the push of a button. Now it’s quick and nearly effortless for every healthcare professional to have a “Just Right” workstation.
