## Face Shields & COVID-19 Test Kits

Latex-free Face Shield is a personal protective equipment device that is used by health care providers including (doctors, dentists, and veterinarians). Designed for protection of the eyes, nose, and mouth, The Face Shield prevents splashes, sprays, and the spatter of bodily fluids from coming in contact with the face. Face shields offer superior protection from airborne particles when compared to facial masks alone.

These face shields are made with a clear plastic visor, adjustable elastic band, and 1" thick foam. Place the comfortable foam pad on forehead, and stretch the elastic band behind the user's head. The elastic band is flexible for various sizes and provides support to keep the shield in place. Use in conjunction with the face masks for the highest level of protection.
